Advances in Knowledge Representation offers a compilation of state of the art research works on topics such as concept theory, positive relational algebra and k-relations, structured, visual and ontological models of knowledge representation, as well as detailed descriptions of applications to various domains, such as semantic representation and extraction, intelligent information retrieval, program proof checking, complex planning, and data preparation for knowledge modelling, and a extensive bibliography. It is a valuable contribution to the advancement of the field. The expected readers are advanced students and researchers on the knowledge representation field and related areas; it may also help to computer oriented practitioners of diverse fields looking for ideas on how to develop a knowledge-based application.

Completely revised to meet the latest Board of Nurse Examiners criteria for the NCLEX-RN®, this review book contains over 3,500 questions and answers with rationales covering all areas included on the exam. Two substantially updated introductory chapters discuss studying and test-taking strategies and describe the exam format in detail. Subsequent sections cover adult care, psychiatric care, maternal-neonatal care, and care of the child, plus chapters on leadership and management and law and ethics. Six 75-question comprehensive tests appear at the end of the book. This Third Edition also includes nearly 100 new alternate-format questions.

This book constitutes the thoroughly refereed postproceedings of the 6th Workshop of the Cross-Language Evaluation Forum, CLEF 2005. The book presents 111 revised papers together with an introduction. Topical sections include multilingual textual document retrieval, cross-language and more, monolingual experiments, domain-specific information retrieval, interactive cross-language information retrieval, multiple language question answering, cross-language retrieval in image collections, cross-language speech retrieval, multilingual Web track, cross-language geographical retrieval, and evaluation issues.

The 7th campaign of the Cross-Language Evaluation Forum (CLEF) for Eu- pean languages was held from January to September 2004. Participation in the CLEF campaigns has increased each year and CLEF 2004 was no exception: 55 groups submitted results for one or more of the di?erent tracks compared with 42 groups in the previous year. CLEF 2004 also marked a breaking point with respect to previous campaigns. The focus was no longer mainly concentrated on multilingual document retrieval as in previous years but was diversi?ed to include di?erent kinds of text retrieval across languages (e. g. , exact answers in the question-answering track) and retrieval on di?erent kinds of media (i. e. , not just plain text but collections containing image and speech as well). In ad- tion, increasing attention was given to issues that regard system usability and user satisfaction with tasks to measure the e?ectiveness of interactive systems or system components being included in both the cross-language question - swering and image retrieval tasks with the collaboration of the coordinators of the interactive track. The campaign culminated in a two-and-a-half-day workshop held in Bath, UK, 15–17 September, immediately following the 8th European Conference on Digital Libraries. The workshop was attended by nearly 100 researchers and s- tem developers.

With this volume of the series Logic, Epistemology, and the Unity of Science edited by S. Rahman et al. a challenging dialogue is being continued. The series' first volume argued that one way to recover the connections between logic, philosophy of sciences, and sciences is to acknowledge the host of alternative logics which are currently being developed. The present volume focuses on four key themes. First of all, several chapters unpack the connection between knowledge and epistemology with particular focus on the notion of knowledge as resulting from interaction. Secondly, new epistemological perspectives on linguistics, the foundations of mathematics and logic, physics, biology and law are a subject of analysis. Thirdly, several chapters are dedicated to a discussion of Constructive Type Theory and more generally of the proof-theoretical notion of meaning.Finally, the book brings together studies on the epistemic role of abduction and argumentation theory, both linked to non-monotonic approaches to the dynamics of knowledge.

You would think a Native American, who could track a piss ant through a meadow covered in heavy grass, wouldn't get lost. But he was lost. Orion Brown, son of a full-blood Lakota Sioux was lost, but not in any geographical location. Orion was lost within himself. The deaths of five of Gunnery Sergeant Orion Brown's men in combat in Afghanistan, and their battle buddies crying on his shoulder, had put him into unknown territory. Oh, he'd remained strong for the Marines who survived. He bucked them up to resume combat without their battle buddies guarding their sixes, but it had cost him. His stronger than strong routine had earned him an honorable discharge from the Marine Corps, panic attacks, and the inability to touch or be touched by other human beings without having a nuclear nervous meltdown. His assigned VA shrink was a joke. Well, the man himself wasn't a joke. He was sincere, he gave the impression he cared, and he listened when he grudgingly shared some of his feelings, but if he mentioned "survivor's guilt" just one more time, Orion would show him just how much damage a Marine could do to office furniture. The doc just didn't get it. He was damned if he tried to open up and interact with the people around him, and he was equally screwed if he let anyone throw an arm over his shoulder or kiss his cheek or slap him on the back. The first induced no feeling at all, as in semi-frozen stiff on a morgue slab, and the second induced panic attacks of epic proportions. He was rapidly being torn apart by the dichotomy of reactions. A slip of a finger on his PC keyboard, offered salvation. The BDSM site wanted to know if he was a Dominant or a submissive. He almost didn't fill out the personal questionnaire, but overhearing the prevailing opinion of him from two of his students in the Marine Special Operations Tracking/Counter-tracking Course he taught, convinced him he needed to go beyond conventional medical practice. Maybe it wouldn't be so bad to have an extremely sexy Mistress paddling his backside if he was brought back to the land of the normal. But the Great Spirit was not inclined to grant him normal. Irony of ironies, there was no female Dominant at the local dungeon strong enough to keep him from topping her. Instead, he was assigned to Dai Waleska. A six foot, two-inch Japanese-American Kung Fu Master. Now the overriding question was, was it worth submitting to another man's physical, and possibly sexual, domination for a chance at getting back on a normal track. Which was more important? Dominance and submission to conquer his frozen core and panic attacks, or maintaining a macho Marine image that would more than likely end with him gargling with a Glock somewhere down a very short road?

Sandra Smith's Review for NCLEX-RN®, Thirteenth Edition is a comprehensive and current evidence-based RN content review. Following the latest NCLEX-RN exam blueprint, it features 2,500 NCLEX® formatted practice questions with detailed answers and rationales that stimulate critical thinking. The reader-friendly approach includes a clear and concise outline format with study guidelines and test-taking strategies. It also covers all of the latest trends, evidence-based treatment guidelines, and additional updated information needed for safe clinical practice and patient care. New to this edition is an expanded emphasis on patient safety, the National Patient Safety Goals and NCLEX® examination preparation, ties to QSEN competencies, and a greater focus on evidence-based clinical practice. Please note, Navigate TestPrep must be purchased seperately.
