Winner of the 2003 Nobel Prize in Literature. J. M. Coetzee presents a coherent, unorthodox analysis of censorship from the perspective of one who has lived and worked under its shadow. The essays collected here attempt to understand the passion that plays itself out in acts of silencing and censoring. He argues that a destructive dynamic of belligerence and escalation tends to overtake the rivals in any field ruled by censorship. From Osip Mandelstam commanded to compose an ode in praise of Stalin, to Breyten Breytenbach writing poems under and for the eyes of his prison guards, to Aleksander Solzhenitsyn engaging in a trial of wits with the organs of the Soviet state, *Giving Offense* focuses on the ways authors have historically responded to censorship. It also analyzes the arguments of Catharine MacKinnon for the suppression of pornography and traces the operations of the old South African censorship system. "The most impressive feature of Coetzee's essays, besides his ear for language, is his coolheadedness. He can dissect repugnant notions and analyze volatile emotions with enviable poise."—Kenneth Baker, *San Francisco Chronicle Book Review* "Those looking for simple, ringing denunciations of censorship's evils will be disappointed. Coetzee explicitly rejects such noble tritenesses. Instead . . . he pursues censorship's deeper, more fickle meanings and unmeanings."—*Kirkus Reviews* "These erudite essays form a powerful, bracing criticism of censorship in its many guises."—*Publishers Weekly* "Giving Offense gets its incisive message across clearly, even when Coetzee is dealing with such murky theorists as Bakhtin, Lacan, Foucault, and René; Girard. Coetzee has a light, wry sense of humor."—Bill Marx, *Hungry Mind Review* "An extraordinary collection of essays."—Martha Bayles, *New York Times Book Review* "A disturbing and illuminating moral expedition."—Richard Eder, *Los Angeles Times Book Review*

Summary Fast ASP.NET Websites delivers just what it promises—practical, hands-on guidance to create faster, more efficient ASP.NET sites and applications. This book offers step-by-step .NET-specific examples showing you how to apply classic page optimization tips, ASP.NET-specific techniques, and ways to leverage new HTML5 features. About the Technology There's a real cost to inefficient HTTP requests, overloaded data streams and bulky scripts. Server throughput is a precious commodity and seconds—even tiny fractions of a second—can seem like an eternity while a visitor waits for your site to load. As an ASP.NET developer, there are dozens of techniques you can apply immediately to make your sites and applications faster. You'll find them here. About this Book Fast ASP.NET Websites delivers just what it promises—practical, hands-on guidance to create faster, more efficient ASP.NET sites and applications. This book offers step-by-step .NET-specific examples showing you how to apply classic page optimization tips, ASP.NET-specific techniques, and ways to leverage new HTML5 features. Readers should be familiar with basic HTML, CSS, and ASP.NET concepts. Purchase of the print book includes a free eBook in PDF, Kindle, and ePub formats from Manning Publications. What's Inside Drastically improved response times Tips for Webforms and ASP.NET MVC sites Optimizing existing pages .NET-specific examples About the Author Dean Hume is a software developer and blogger based in the U.K. A passionate techie, he created the ASP.NET HTML5 toolkit and blogs regularly about web performance at www.deanhume.com. Riparian areas—transitional zones between the aquatic environments of streams, rivers, and lakes and the terrestrial environments on and alongside their banks—are special places. They provide almost two hundred thousand miles of connections through which the waters of Texas flow. Keeping the water flowing, in as natural a way as possible, is key to the careful and wise management of the state's water resources. Texas Riparian Areas evolved from a report commissioned by the Texas Water Development Board as Texas faced the reality of over-allocated water resources and long-term if not permanent drought conditions. Its purpose was to summarize the characteristics of riparian areas and to develop a common vocabulary for discussing, studying, and managing them. To learn more about The Meadows Center for Water and the Environment, sponsors of this book's series, please [click here](#).

Tells how clutches & transmissions work - gear, friction, & hydrostatic. Gives basics of service & repair of major types of drives, transmission, transaxles, & clutches used in compact equipment. Includes troubleshooting guides. It provides the reader with a list of skills & knowledge that should be learned with each chapter. CONTENTS: Basic principles, clutches, mechanical transmissions, hydrostatic

transmissions, belt & chain drives, differentials, final drives, power take-offs, service & maintenance & troubleshooting.

Contains the proceedings of the Association.

Practical guide for lift directors, lift planners, rigging engineers, site superintendents, field engineers, rigging foremen, heavy lift managers, heavy haul planners, crane operators, and advanced riggers

The use of human in vitro fertilization in the management of infertility is the outgrowth of years of laboratory observations on in vitro sperm-egg interaction. "The editors of this work have themselves contributed significantly to basic knowledge of the mammalian fertilization process. The observations of Don Wolf on sperm penetration, the block to polyspermy and, most recently, sperm hyperactivation in the monkey and human, Gregory Kopf's elucidation of the mechanisms of sperm activation during penetration and the reciprocal dialogue between sperm and egg, and Barry Bavister's definition of culture conditions and requirements necessary for in vitro oocyte maturation, fertilization and development in model mammalian systems including nonhuman primates have contributed greatly to our understanding of the mammalian fertilization process. Wolf, Kopf and Gerrity have enjoyed substantial interaction with clinicians in Departments of Obstetrics and Gynecology and have been directly involved with successful IVF programs. Both Wolf and Kopf have served as research scientists in the Division of Reproductive Biology at the University of Pennsylvania, which, for more than 22 years, has fostered co-mingling of clinically oriented and basic science faculty. It is through such interaction, which clearly exists at many institutions including the University of Wisconsin, that the

Read Free Broderson Crane Repair Manual

process of technology transfer is best served. Without an exquisitely coordinated laboratory, there can be no consistent success in human in vitro fertilization. Quality control is pivotal, but close collaboration between the laboratory and the clinic is also essential as information is shared and correlated.
