

Leap Motion Ieee Paper

When somebody should go to the book stores, search inauguration by shop, shelf by shelf, it is truly problematic. This is why we allow the ebook compilations in this website. It will definitely ease you to look guide leap motion iewee paper as you such as.

By searching the title, publisher, or authors of guide you essentially want, you can discover them rapidly. In the house, workplace, or perhaps in your method can be every best area within net connections. If you seek to download and install the leap motion iewee paper, it is definitely simple then, previously currently we extend the associate to purchase and create bargains to download and install leap motion iewee paper in view of that simple!

Abstract:In this paper, we present and evaluate an interactive gesture controlled application using the Leap Motion for medical visualization, focusing on user satisfaction as an important component in the composition of the application success factors. Usability testings were conducted to verify important application requirements, among which, the asepsis in the working environment, accuracy of the interaction gestures, interaction time, level of interactivity, naturalness, effectiveness ...

In this paper, we present our proposed software called LeapAngles, that uses Leap Motion sensor to get goniometric measurements of the hand, such as Abduction of the Hand Fingers (AHF) and Flexion of the Metacarpophalangeal (MCP) Joint. To test the precision of the software, we carry out an experiment in which the measurements of AHF and MCP angles were taken by a physical rehabilitation specialist in ten young adults using a goniometer and LeapAngles software.

In this paper, we propose a novel feature vector which is suitable for representing dynamic hand gestures, and presents a satisfactory solution to recognizing dynamic hand gestures with a Leap Motion controller (LMC) only. These have not been reported in other papers. The feature vector with depth information is computed and fed into the Hidden Conditional Neural Field (HCNF) classifier to recognize dynamic hand gestures.

Abstract: This paper presents a method for automatic detection of cervical myelopathy by using Leap Motion Sensor for sensing hand motion to apply a method called the 10-s grip and release test. Leap Motion data is analyzed for computing feature of hand motion, which is used for automatic detection of patient or healthy people by random forests algorithm for machine learning.

Abstract: The objective of this research was to design and construction of the system for control robot arm using LEAP Motion Controller. This research has adapted the principle of LEAP Motion Controller and servo motor control. The designed and constructed the project was composed of 3 main parts: 1) detector part, 2) signal control and processing part using microcontroller ATMEL 328 on board ...

Gesture based human-robot interface is a highly efficient robot control strategy for its simple operation and high availability. This paper develops a hand gesture based robot control system using Leap Motion. The process that the robot responds to human ' s hand gesture contains noise suppression, coordinate transformation and inverse kinematics. A Client/Server structured robot control system is developed, which provides the function of controlling virtual universal robot UR10 with hand ...

The paper deals with an experimental assessment of the Leap Motion Controller \$\$\${/textregistered}\$\$\$. This device is able to track the user ' s hands in a real environment. Due to low-invasiveness and easiness of use, it is promising for the integration in virtual or augmented reality, research and entertainment scenarios. The assessment is performed in a real context using volunteers ...

Dynamic hand gesture recognition is a desired alternative means for human-computer interactions. This paper presents a hand gesture recognition system that is designed for the control of flights of unmanned aerial vehicles (UAV). A data representation model that represents a dynamic gesture sequence by converting the 4-D spatiotemporal data to 2-D matrix and a 1-D array is introduced.
