This book brings together recent papers which make important contributions to understanding and developing primary geography. It considers primary teachers' and trainee teachers' knowledge of geography; how the primary curriculum uses geography; teachers' planning of geography teaching; the way in which aspects of geography are taught; what high quality geography might look like; and children's geographical understanding and voices. Though geography curricula change quite often in countries around the world, the core matters noted above remain of constant and vital importance. The papers in this book either concern research with primary teachers and children, or consider key concerns in primary geography, providing important perspectives for thinking about future developments in geography teaching and curriculum initiatives in primary schools. This is a stimulating and enticing collection written by leading exponents of, and experts in, primary geography education. This book was originally published as a special issue of Education 3-13.

This book explores the power of the map in fiction and its centrality to meaning, from Treasure Island to Winnie-the-Pooh.

"When Maps Become the World explores how scientific theories, models, and concepts used to represent and intervene in the world function as maps, and the consequences of this, both good and bad. Maps are not the territory they describe but abstractions from it, or models of it. By preserving certain features of the modeled world at the expense of distorting others, scientific abstractions can be useful within a set scope and for particular purposes. Maps not only summarize, organize, and clarify, they also often disclose new, previously unnoticed facts. In this book Rasmus Winther examines the properties, promises, and limits of scientific knowledge and practice through a philosophical analysis of scientific maps. Because, he argues, they should always be considered fallible and limited, he teaches his readers to use analytic tools to resist "when maps become the world.""--
