31st Marine Expeditionary Unit

The Marine Expeditionary Unit is a Marine Air Ground Task Force with a strength of about 2,200 Marines and sailors. The 31st MEU consists of a company-sized command element, a battalion landing team (BLT), (an infantry battalion reinforced with artillery, amphibious vehicles and other attachments), a medium tiltrotor squadron (reinforced), (which includes detachments of short take-off, vertical landing airplanes and heavy, light, and attack helicopters), and a combat logistics battalion.

The author asserts that in the next ten to fifteen years the probability of employing the Marine Expeditionary Unit (MEU) in limited conflicts on behalf of United States foreign policy interests will increase. Further, that the threat posed by likely enemies is sophisticated enough to require enhanced combat capability for the MEU to be an

Read Free Marine Expeditionary Unit Meu

effective deterrent. The author proposes a solution to this problem with the assignment to the MEU of Marine Corps tactical fixed-wing aircraft and command and control assets in a composite for structure. This concept of employment of existing aviation assets is within the context of current Marine Corps doctrine but is not normally applied at the MEU level of operations.

"An introduction to the life of a marine in a Marine Expeditionary Unit (MEU). Describes some of the missions assigned to MEUs, how they train, and their role in the U.S. armed forces"--

The capabilities of the MEU(SOC) may limit its ability to enable an

Read Free Marine Expeditionary Unit Meu

Amphibious Task Force (ATF) MEB, but it is fully capable of enabling both a Maritime Prepositioning Force (MPF) MEB and an Air Contingency Force (ACF) MEB. The MEU(SOC) program has been under attack for many years by those who believe it has become too SOC-centric. When the Commandant announced that the Marine Corps would reestablish the MEB, the critics renewed their attacks on the MEU(SOC) program, stating that it was not capable of conducting enabling missions in support of the MEB. An examination of the three types of MEBs (Air Task Force, Maritime Prepositioning Force, and Amphibious Task Force) was conducted and requirements

Read Free Marine Expeditionary Unit Meu

unique to each MEB were identified. These requirements were compared with the capabilities of the MEU(SOC) and deficiencies were noted.

Concurrently, deficiencies were noted in the ability of the Marine Corps and Navy to support amphibious operations. The author concludes that the MEU(SOC) is adequately trained and capable of enabling an ACF or MPF MEB, provided that support is allocated to ensure naval and air superiority. The MEU(SOC) has difficulty supporting an ATF MEB enabling mission. The major deficiency associated with supporting the ATF enabling mission is the MEU(SOC)'s limited ability to conduct forcible entry on a defended beach. Without the

Read Free Marine Expeditionary Unit Meu

ability to provide a lodgment for the MEB, the MEU's capability is limited to conducting preassault shaping and reconnaissance operations. Capability deficiencies extended beyond the MEU(SOC) and included significant deficiencies in the capabilities of the Marine Corps and Navy to support amphibious operations.

The Marine Expeditionary Unit (Special Operations Capable), or MEU(SOC) program has been around since the middle 1980's, and looks much the same today as it did nearly twenty years ago. MEU(SOC)s are teamed up with amphibious shipping squadrons of the United States Navy, together forming Expeditionary Strike Groups (ESGs). ESGs represent a

Read Free Marine Expeditionary Unit Meu

highly capable, forward deployed, agile, and general purpose force providing regional combatant commanders a lethal element of national power. Since its inception in 1984, the MEU(SOC) program has undergone minor modifications in both task organization and mission essential task lists (METL's). Despite these changes the MEU(SOC) program of the 21 century remains largely unchanged. Among the many reasons to take a close look at the MEU(SOC) program, the most recent and contentious are: Examining the nature of current ESG experiments, employment of MEU(SOC) units in the Global war on Terrorism (GWOT) and studying of the MEU(SOC) role in

Read Free Marine Expeditionary Unit Meu

the Department of Defenses (DoD) ongoing effort to transform MEU(SOC) relevancy is indeed important to not only the Marine Corps, butg the entire Naval service.

The Marine Expeditionary Unit (MEU) SMARTbook is designed to be a reference for MEU and PHIBRON Commanders, MEU and PHIBRON staffs and the commanders and staffs of the Major Subordinate Elements (MSE) and Naval Support Elements (NSE) of the ARG-MEU team. This is the 3rd edition of the MEU SMARTbook, updated for 2020 with 34 pages of updated/additional material and a return of the original GBC plastic-comb binding.

This important volume, guided by this fundamental premise of operational law as a legal umbrella, this handbook divides operational law into discrete chapters discussing the legal disciplines and functions that comprise it. Since World War II, in nearly every crisis, the United States Marine Corps has projected forces to the crisis area with the ability to move ashore, backed with sufficient sustainability for prolonged operations. These forces have been organized into Marine Air Ground Task Forces (MAGTF), a combination that includes air, ground, and logistic assets, that maximizes the combat power of each of the war fighting elements. This capability

Read Free Marine Expeditionary Unit Meu

is unique among all the military services and provides combatant commanders with scalable, versatile, and agile expeditionary forces. The largest standing MAGTF is the Marine Expeditionary Force (MEF), which is comprised of a headquarters element, possibly multiple divisions (ground combat element), wings (aviation combat element), and logistic groups (combat service support element). The intermediate-sized MAGTF is the Marine Expeditionary Brigade (MEB), which is normally composed of a headquarters element, a reinforced infantry regiment, a composite air group, and a brigade service support element. The smallest standing MAGTF is

Read Free Marine Expeditionary Unit Meu

the Marine Expeditionary Unit (MEU), which is composed of a headquarters element, a reinforced infantry battalion, a composite air squadron, and a MEU service support group. In addition to the MEF, MEB, and MEU, a MAGTF can be task organized into essentially any size for a specific mission, operation, or exercise. Such a MAGTF is referred to as a Special Purpose MAGTF (SPMAGTF). MAGTFs have long provided the United States with a broad spectrum of response options when U.S. and allied interests have been threatened, or in non-combat situations requiring instant responses to a crisis. Selective, timely, and credible commitments of MAGTF units have, on many

Read Free Marine Expeditionary Unit Meu

occasions, helped bring stability to a region and sent signals worldwide to aggressors that the United States is willing to defend its interests and able to do so on extremely short notice with a significantly powerful force. With these unique MAGTF capabilities come unique challenges. Three of these challenges are recurrent themes of this book: tempo, transience, and isolation. First, MAGTF operations are characterized by speed. Things move fast in the MAGTF world, from the ability to deploy at a moment's notice to the ability to execute missions within hours of receipt of a warning or execute order. As a result, MAGTF commanders and staff planners, including the judge advocate (JA),
