The Concept Contractual Management offers a holistic approach to managerial decision-making based on contracts or business processes that are related to contracts. It explains management from the point of view of the contract, just as it interprets the contract from the point of view of management. Thus, the approach highlights the great inherent potential of

contracts for managing companies, transactions and business relationships. The book addresses students as well as practitioners and gives insights into the usage of contracts to manage companies or relationships. It covers contract handling from preliminary deliberations to negotiations, implementation, and all the way to the evaluation of the contract within the company. Furthermore, it provides competencies to design and implement a contract and to organize the relevant processes. The Content In Part 1, the book explains the theoretical foundations of Contractual Management; in Part 2, the application of the approach is illustrated through case studies which cover various sectors, industries, company sizes, contract types, and management situations. Theory part: Contractual Management – A Holistic Approach to a Diverse Issue. Case study part: 11 case studies arranged according to specific contract-related topics: Information and Communication – Change – Enterprise Networks – Conflict – Accounting and Financing – Legal Compliance – Societal Steering. The Editors Professor Dr. Ralph Schuhmann: After holding a senior management position in industry, Ralph Schuhmann now teaches Business Law at Ernst-Abbe-Hochschule in Jena, Germany. He is the scientific director of the Contractual Management Institute at SRH Hochschule Berlin and has published various articles on contract law and contract management. Professor Dr. Bert Eichhorn: Before his appointment as professor for International Law and Business Law at SRH Hochschule Berlin, Bert Eichhorn worked as a legal consultant at the EU Parliament and as a lawyer. He has published numerous articles in national and international scientific journals in the area of contract management and international law. He is the managing director of the Contractual Management Institute at SRH Hochschule Berlin.

Autism is an emerging area of basic and clinical research, and has only recently been recognized as a major topic in biomedical research. Approximately 1 in 150 children are diagnosed as autistic, so it is also an intense growth area in behavioral and educational treatments. Financial resources have begun to be raised for more comprehensive research and an increasing number of scientists are becoming involved in autism research. In many respects, autism has become a model for conducting translational research on a psychiatric disorder. This text provides a comprehensive summary of all current knowledge related to the behavioral, experiential, and biomedical features of the autism spectrum disorders including major behavioral and cognitive syndromology, common co-morbid conditions, neuropathology, neuroimmunology, and other neurological correlates such as seizures, allergy and immunology, gastroenterology, infectious disease, and epidemiology. Edited by three leading researchers, this volume contains over 80 chapters and nine shorter commentaries by thought leaders in the field, making the book a virtual "who's who" of autism research. This carefully developed book is a comprehensive and authoritative reference for what we know in this area as well as a guidepost for the next several years in all areas of autism research.

This book is a collection of writings on how society has stigmatized mentally ill persons, their families, and their caregivers. First-hand accounts poignantly portray what it is like to be the victim of stigma and mental illness. Stigma and Mental Illness also presents historical, societal, and institutional viewpoints that underscore the devastating effects of stigma.

CNC Machining Certification Exam Guide is focused on providing the knowledge base required for obtaining certification, credentialing and/or job preparation in CNC Machining with CNC Mills and Lathes. It covers foundational skills that all those seeking employment as a CNC Operator/Machinist must possess. Managers responsible for workforce development in manufacturing facilities will use the book as a guide for on-the-job employee training and apprenticeships. The work can be used as a curriculum component for technical schools and colleges for students preparing for certification and credentialing exams based on the National Institute for Metalworking Skills (NIMS) Machining Level I standards for: CNC Mill Programming and Setup and Operations, and CNC Lathe Programming and Setup and Operations. At a time when the CNC market is experiencing a shortfall of skilled, qualified workers, this Exam Guide is the perfect resource. Features Presents CNC Programming with G-Code so users can execute their programs with confidence. Focuses on the creation of CNC programs using Computer Aided Manufacturing (CAM). Written with the end goals of certification, credentialing and job readiness in mind. Practice study questions mimic those presented on credentialing exams and practice exercises prepare readers for the required practical activities. An affiliated website ([www.CNCCertification.com](http://www.CNCCertification.com)) contains additional certification questions and answers, as well as suggested additional exercises.

This book provides fundamental principles, design procedures, and design tools for unmanned aerial vehicles (UAVs) with three sections focusing on vehicle design, autopilot design, and ground system design. The design of manned aircraft and the design of UAVs have some similarities and some differences. They include the design process, constraints (e.g., g-load, pressurization), and UAV main components (autopilot, ground station, communication, sensors, and payload). A UAV

designer must be aware of the latest UAV developments; current technologies; know lessons learned from past failures; and they should appreciate the breadth of UAV design options. The contribution of unmanned aircraft continues to expand every day and over 20 countries are developing and employing UAVs for both military and scientific purposes. A UAV system is much more than a reusable air vehicle or vehicles. UAVs are air vehicles, they fly like airplanes and operate in an airplane environment. They are designed like air vehicles; they have to meet flight critical air vehicle requirements. A designer needs to know how to integrate complex, multi-disciplinary systems, and to understand the environment, the requirements and the design challenges and this book is an excellent overview of the fundamentals from an engineering perspective. This book is meant to meet the needs of newcomers into the world of UAVs. The materials are intended to provide enough information in each area and illustrate how they all play together to support the design of a complete UAV. Therefore, this book can be used both as a reference for engineers entering the field or as a supplementary text for a UAV design course to provide system-level context for each specialized topic.
